**Jones Breaks Ground for new Office Facility**

Late June saw construction equipment roll into the Linwood mill location for the building of a new office complex. This new, country-style facility will be the new home for the Linwood office, dispatch and customer service staff and is scheduled for completion this fall. The office is being built on the south side of the premix plant in Linwood. Watch future newsletters for updates on this exciting project!

**Various New Hog Contract Options Available**

Black Creek Livestock and duBreton have several new production and management contracts available. Programs and contracts available include:

- RWA/VGF (Raised Without Antibiotics/Vegetable Grain Fed)
- Berkshire
- Conventional Hog Contracts
- Rustic Regular (Certified Humane/GAP) (Independent and Management Contracts)
- Rustic Organic (Independent and Management Contracts)

For more information, please contact Francisco Trejo (JFM) 519-857-6278 or Larry Bowman (Black Creek) 519-502-1131. *Black Creek is a division of Jones Feed Mills Ltd.*

Finishing Barns also required for our Rustic Regular (Certified Humane/GAP) Program. Long-term contracts available.

**Kentucky Equine Research Conference Update**

Sarah Bartlett and Holly McGill represented JFM at the annual Kentucky Equine Research (KER) conference in late April. This conference presents the newest in equine research along with nutrition and management information which can be utilized in ration formulation and on-farm recommendations. Interestingly, one of the new test feeds KER are experimenting with for young race stock contains micronized beans manufactured by Jones Feeds!

A treadmill is used to measure CO2 & oxygen in the muscles of resident horses.

**Jones Feed Mills – Goes Viral!** Last month Jones Feed Mills launched its new Facebook and Twitter pages. Check us out! To Like/Follow us go to:

**Ask about our introductory feed specials!**  
**20% Discount on all Poultry Feeders/Waterers**  
Heidelberg – Wroxeter Mills  
April 1 - August 19, 2016

## Now Available! DECCOX-M

Deccox-M is an aid in the prevention of coccidiosis in beef, dairy and veal calves

## Mold-Zap

Jones Feed Mills reminds producers of forage-based rations that “Mold-Zap” from Alltech is an available product that can aid and assist in the reduction of heating and molding in TMR’s and stored forages. Mold-Zap is compatible with other feed ingredients, assists with feed intakes and can kill a variety of molds often found in various forage and grain based feeds. Talk to your JFM Beef or Dairy Rep to learn more.

## Notice of Product Change:

Dairy Producers, we will now be offering the new Phibro product,

**OmniGen**

opposed to Nutragen. OmniGen is a similar product, however is without the basic yeast. Producers will see a cost savings through this change. Talk to your JFM Dairy Rep to learn more.

## Making Cow’s Milk Better for Calves!

By Chris Meadows and Holly McGill

## Thrive Milk Supplement

ESSENTIAL  
Lipids **4** Life

It is increasingly reported by popular media, that different kinds of fats can have different effects on the human body. While for many years, fat in general was “bad”, science is now learning that the medium and short-chain fatty acids can have many positive health benefits when included in the human diet; whether it be fighting obesity and heart disease or helping to prevent some cancers. We are now starting to learn that these different types of fats have different effects when included in dairy cow diets too. For example, palm fat increases butter fat synthesis in the udder, Omega-3 fats improve fertility, and stearic acid (a long chain fat) increases body condition and may affect dry matter intakes. The pasture and hay-based production systems of the past provided many medium and short-chain fatty acids to the cows in their diets, which were included in their milk. As production systems changed to confined housing and feed programs based on corn silage and corn, the fat profile produced by the cow in her milk has changed to reflect the fats that are in her feed. Milk fat is now high in long chain fatty acids and lower in medium and short chain fatty acids – the fats that have many of the health benefits that we are seeking!

Short chain fats, such as butyrate, are required by calves to promote rumen and gut development for optimum nutrient absorption. Medium chain fats, and fats such as linolenic acid, promote immune function and development. Research done by Provimi in the U.S. has shown that by supplementing these fats in milk replacer and cow’s milk, calves show increased rumen development, improved average daily gains, and reduced the number of scour days and treatments for scours. These fatty acids are supplemented using the technology “Essential Lipids 4 Life” within the Jones “Whole Start” milk replacers and Whole Start line of calf starters and growers; a technology that has been unique to Jones Feed Mills for years. If you are feeding whole milk to calves, you can now supplement it with “Thrive”, a product that is also produced with the “EL4L” technology. Ask your Jones Dairy Sales Consultant about the fatty acid advantage of Essential Lipids for Life that is in Thrive and all of Jones Whole Start Calf products.
