Notice: All JFM Mills will be closed Monday July 2/18 for Canada Day!

New Playground Equipment for Linwood Public School

Jones Feed Mills and Black Creek Livestock are proud to be supporters of the Linwood Public School new playground project. Plans are underway by the LPS (Linwood Public School) Playground Committee to erect a new playground on the school property. #JFMCARES will post photos of the progress of this exciting new playground in future releases. Congratulations to the Linwood Public School Playground Committee for all of their planning and fund-raising efforts!

Program Update from Adam Hill of Ontario Corn Fed Beef

It's important to realize that the Ontario Corn Fed Beef Program provides value to the producer through more things than just the per-head incentive. The program is utilizing shelf space in the larger retail stores and privately-owned establishments across Ontario. Creating demand for Ontario Corn Fed Beef by sharing our brand story through Ontario and in key export markets. A key element for the program is the importance of explaining to the customers and the consumers how and why we raise the cattle we do in this province and under the brand protocols. The Ontario Corn Fed Beef Program Brand itself has developed into one of the largest producer owned beef programs in Canada and for good reasons. The program's success comes from the dedicated farm family producers we have in Ontario. Our consistent feeding program reflects on the high quality naturally great tasting beef we produce. This summer we will be hosting incoming trade missions from Japan and China as more and more customers become interested in purchasing our branded beef products. During the visit, we will be taking time for feedlot tours as well as explaining how our on-farm Quality Assurance Program is being executed. Ontario Corn Fed Beef will also be participating in the Canadian Beef Industry Conference held in London, Ontario. This will be an excellent chance to showcase our truly Canadian brand. It will also show beef producers from across Canada how we have developed a Canadian branded beef program that provides benefit to more than just our program members in Ontario, but as well all of the provinces that raise the feeder cattle that are a key element of our success. They too can be proud of the program and its growth over the years. Ontario Corn Fed Beef Program is a Canadian branded beef program that all of us can be proud of.

By Adam Hill is the OCFB Quality Assurance Manager

For more information on the Ontario Corn Fed Beef program, contact Adam Hill at 519-533-7536 or your JFM Beef Sales Consultant.

waters and of course, sound advice!

Raising Amazing Chicks

Now Available!

JFM is excited to be selling the new popular book, "Raising Amazing Chicks" by Dr. Scott Gillingham and Sherri Griffin. This informative, easy reading manual is available from all JFM mill locations.

Cleaning and Disinfecting for Calf Areas Part 1: Having a Proper Cleaning Routine for Feeding Equipment

Cleaning calf feeding equipment is something that gets overlooked very easily on farms. It takes time to clean and disinfect, and with a busy schedule on most farms, who has time? When feeding equipment doesn't get cleaned properly bacteria starts building up, which can create many problems. Whole milk or milk replacer will leave a residue behind that bacteria likes to grow in. Calf feeding equipment like bottles, pails, lids, and milk bars are some of the places where milk proteins get stuck and are a struggle to remove. When these milk proteins don't get cleaned off the calf feeding equipment, biofilms start building up. Biofilm is a slimy, greasy film of bacteria that sticks to surfaces and is pathogenic; meaning it may cause diseases in calves. The tricky part of biofilm is that it typically is resistant to conventional methods of disinfection. So, how do we get rid of this biofilm and stop the growth and spread of bacteria that our calves are coming into contact with? A product that has shown us the best results to stop the growth and build-up of bacteria is 'Biosolve Plus'. Biosolve Plus is a multipurpose heavy duty cleaner and degreaser. This product will lift the greasy proteins left behind from the milk and expose the bacteria underneath. When the bacteria is exposed, rinsing the feeding equipment with water and letting it dry is critical. Using a disinfectant like Virkon on the feeding equipment once a week will prevent bacteria growth and biofilm build-up. Have more questions about cleaners and disinfectant? Call or text Lisa at 519-807-3870.

Vitamin Availability Update: The last eight months has undoubtedly been a challenge to the human and livestock vitamin manufacturing industry. To update you, JFM has learned that manufacturing of key vitamins has once again resumed. Though it will take time to replenish global inventories, we are expecting to see better availability of Vitamins A, D & E beginning mid summer.

It's Been a Year!

This summer will mark one year since our move back to our new office. We are very proud to be able to work in such a bright, open space and appreciate the many kind comments we have received on the building's design and flow. We always welcome your visit to the office and hope to see you here sometime!
